Patent No. 5641666
GENERAL INFORMATION:
APPLICANT: Vahlensieck, Hans-Friedrich
APPLICANT: Hinnen, Albert
ITLE OF INVENTION: Fungi Resistant to Soraphen A
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSE: Ciba-Geigy Corporation
STREET: Patent Dept., 520 White Plains Rd., POB 2005

Patent No. 6617156

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERBNCE: 032796-032

CURRENT FILING DATE: 1990-08-13

PRIOR PELICATION NUMBER: US 60/055,778

PRIOR FILING DATE: 1997-08-15

NUMBER: OF SEQ ID NOS: 6812

SEQ ID NO 4783
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1314 FTDNRNIHVYEAVSKTS------PLDKRFFTRGIIRTGHIRDDISIQEYLTSEA 1361

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
FILLE OF INVENTION: NUCLEIC FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 7310

A;Title: Protein L, a bacterial immunoglobulin-binding protein and possible virulence de A;Reference number: A41493; MUID:90215984; PMID:2108927
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A42808
Ig light chain-binding protein precursor - Peptostreptococcus magnus
Nyllermate names is protein L
C;Alternate names protein L
C;Species: Peptostreptococcus magnus

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-I- FUNCTION: Catalyzes the cleavage of the glycosidic bond of 2'-
deoxyribonucleosides and the transfer of the deoxyribosyl moiety
to an acceptor purine or pyrimidine base (By similarity).
-I- CATALYTIC ACTIVITY: 2-deoxyr-base(1) + base(2) = 2-deoxyr-
D-ribosyl-base(2) + base(1).
                                                                                                                                                                                                                                                                                                             PubMed=15671160; DOI=10.1073/pnas.0409188102;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nitted (NOV-2001) to the EMBL/GenBank/DDBJ databases.

FUNCTION: Catalyzes the cleavage of the glycosidic bond of 2'-
deoxyribonucleosides and the transfer of the deoxyribosyl moiety
to an acceptor purine or pyrimidine base (By similarity).

CATALYTIC ACTIVITY: 2-deoxy-D-ribosyl-base(1) + base(2) = 2-deoxy-
D-ribosyl-base(2) + base(1).

PATHWAY: Nucleotide metabolism.
SIMILARITY: Belongs to the nucleoside deoxyribosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          6 IYFGAGWFTDRQNKAYKEAMEALKENPTIDLENSYVPLDNQYKGIRVDEHPEYLHDKV-W
